ANNEXURE – II – SPECIFICATIONS

A. Goalpost

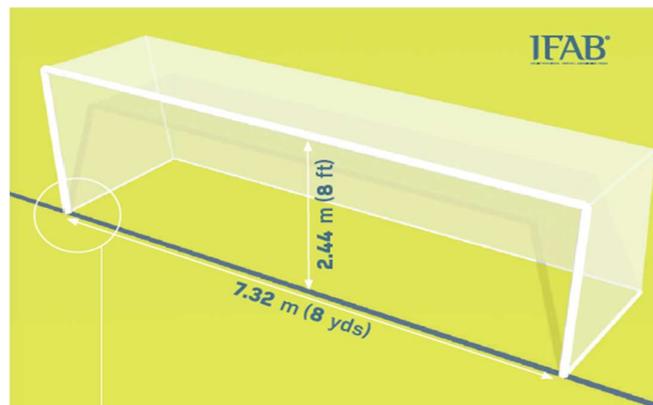

Overview

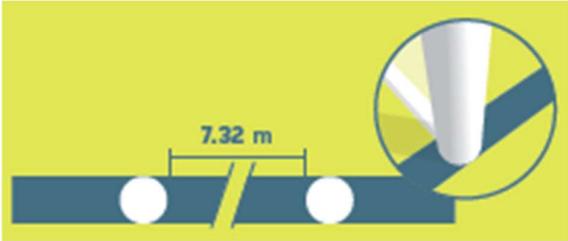

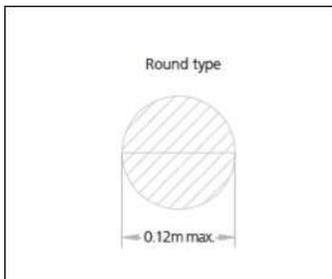

The goalpost consists of two vertical posts equidistant from the corner flag posts and joined at the top by a horizontal crossbar. These three round (cylindrical) posts are fixed at an angle of 90 degrees as illustrated in the diagram below. The goalposts and crossbar shall be white.

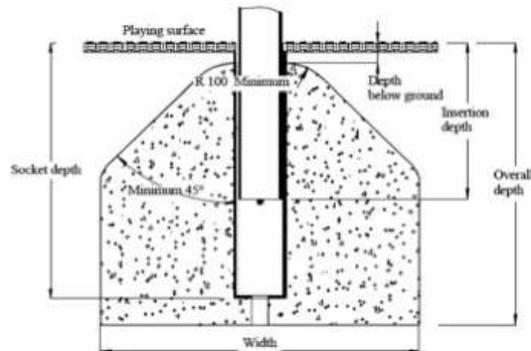

Dimensions (As per IFAB laws of the game)

The distance between the inside of the posts is 7.32m (8 yds) and distance from the lower edge of the crossbar to the ground is 2.44m (8ft.). For measuring this for natural turf, the top of the soil should be used as playing surface.

<p>Shape of Posts</p>	<p>For all FIFA Competitions and for the purpose of this Competition, only round shaped posts are to be used for the goalposts. The position of the goalposts in relation to the goal line must be in accordance with the below graphic.</p> 
<p>Diameter (As per IFAB laws of the game)</p>	<p>The goal post and crossbar must have the same width and depth i.e. 12 cm (0.12m).</p> 
<p>Materials to be used</p>	<p>The goalposts must be made of aluminium compliant to the strength and stability standards as specified in BS EN 748:2013+A1:2018 or BS 8461:2005+A1:2009. The Goalposts should be certified.</p>
<p>External Material</p>	<p>Both, the goalposts, and the crossbar must be polyester powder coated in white colour.</p>
<p>Goal Post Sockets</p>	<p>It is recommended that the installation procedures of the goalposts are done in the appropriate manner to ensure that the goalposts maintain position and shape. Incorrect installation can lead to the collapse of the goalpost frame and increase possibility of injury to the players. It is important the goalposts have a solid foundation in the ground. Goalpost sockets should always be set in concrete foundations. The base of the concrete block should always be square to give a solid foundation and negate the risk of overturning. The size of the concrete block below the surface should be 600mm x 600mm x 600mm.</p> <p><u>Socket depth:</u> The concrete block should have a socket space which will accommodate the goalpost. The minimum recommended depth of the socket is 460mm deep into the concrete block. The concrete block should be rounded gently from the socket and should then slope downwards at an angle of 45 degrees as shown in the figure below. The concrete block should be placed 40mm below the surface of the</p>

ground. This will ensure that even in case of erosion the block remains below the surface of the ground. Goalposts should be inserted at a minimum depth of 300mm into the socket for stability of the frame.
The following is an illustrative diagram of installation.

B. Goal support post

(Generally supplied with the goalpost as a set)

Overview	The Goal support posts are two (2) upright posts placed behind each goal to provide support to the goal nets. It is important that the goal support posts are strong and stable themselves to provide the appropriate stability. The goal support posts should have hooks to tie the goal nets.
Dimensions	2.74m (9 feet) high (from the ground) and 8 cm diameter
Materials to be used	The support posts should be wrapped with a sponge padding for the entire length which will minimise the chance of injury in case of impact.
Colour	The colour should be contrasting to the goalpost colour (white). Dark colours necessary. Dark grey or dark green colours are recommended.
Installation Technique	The support Goal Posts must be affixed to the ground, in at least 300mm deep into the soil. They should be installed 0.5 meters from the end of the goal net and 1 meter to the side of the goal net on either side of the post. Where required, the support posts might need to be set in concrete foundations.

C. Movable Goalpost

Overview	The movable goalpost must have strong wheels for free and east movement and have a mechanism to firmly secure them to the ground during use. These will be used by every team during Training Sessions, as they help to keep the goal mouth area free of excessive use.
----------	---

Dimensions
(As per IFAB laws of the game)

The distance between the inside of the posts is 7.32m (8 yds) and distance from the lower edge of the crossbar to the ground is 2.44m (8ft.). For measuring this for natural turf, the top of the soil should be used as playing surface.

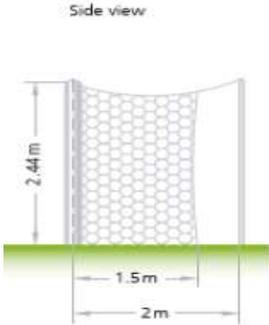

Shape of Posts

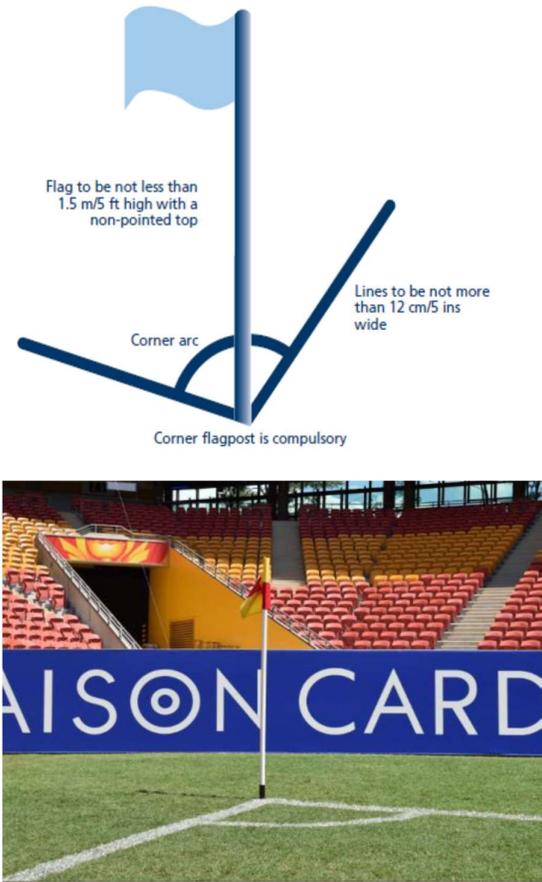

For the purpose of the Competition, only round shaped posts are to be used for the goalposts. The position of the goalposts in relation to the goal line must be in accordance with the below graphic.

Posts Diameter
(As per IFAB laws of the game)

The goal post and crossbar must have the same width and depth i.e., 12 cm (0.12m) (5 ins).

Materials to be used	The movable goalposts must be made of aluminium compliant to the strength and stability standards as specified in BS EN 748:2013+A1:2018 or BS 8461:2005+A1:2009. The goalposts should be certified.
External Material	Both, the goalposts, and the crossbar must be polyester powder coated in white colour.

D. Goal Nets	
Overview	Goal nets should be of a high rigidity material. In FIFA competitions, goal nets of a box shape (which are in the shape of a box extending behind by 1.5 metres) are required, which does not interfere with the goalkeeper.
Dimensions	<p>The height of the goal nets should be 2.44m same as the goalposts and the length is the same as 7.32m. The goal net should extend back 1.5 metres , to create a box like structure as shown in the picture below. The mesh can be either square or hexagonal shaped. The mesh size should be between 70mm to 150mm. If square, the maximum size of the box should be 120mm.</p> <div style="text-align: center;"> <p>Side view</p>  </div>
Materials to be used	<p>High rigidity material with cord diameter of 4.5mm. The cords of the goal nets should be of a braided type, which offer more tensile strength.</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div> <p style="text-align: center;"><i>Example of goal nets</i></p>
Colour	White
Installation Technique	Standard, on hooks (non-metal) attached to the goalpost and goal support post.
E. Corner Flagpoles	
Overview	Flag posts shall be placed at each corner. Flag posts are made of unbreakable, impact resistant material, with a non pointed top, flexible base, high signal optics.
